Optical accessories for the MAC TW1

Extend the functionality of the MAC TW1 with the Martin range of optical accessories. All lenses and attachments can be used without compromising the quality of light.

Quick and easy to change

Fitting a lens kit is quick and easy. Simply swap the current MAC TW1 lens with the new narrow-angle or very wide-angle front, fasten with four quarter-turns and attach the safety wire. No components need to be changed inside the fixture.

Narrow-angle lens kit

For ordering, use Part Number
91610033

The narrower zoom range of 14° to 27° enhances beam intensity and provides a tight beam for venues where longer throw distances are necessary, for example at larger theatres, concert halls, and opera houses.

Very wide-angle lens kit

For ordering, use Part Number 91610032

The very wide-angle lens spreads light from 94° to 102° and is perfect for short-distance projection to light up a large area, for example cycloramas and scenery.

Front accessory holder

For ordering, use Part Number
91611260

The front accessory holder is easily attached to the front of all lens options, with four runners (three static and one spring-mounted clip) to lock accessories into place. Silicone rubber inserts stop any vibration noise while the fixture is moving.

Up to two accessories can fit onto the holder, and there is an attachment eye for a safety wire. The black-coated diecast aluminium matches perfectly the magnesium shells of the MAC TW1.

Front accessories

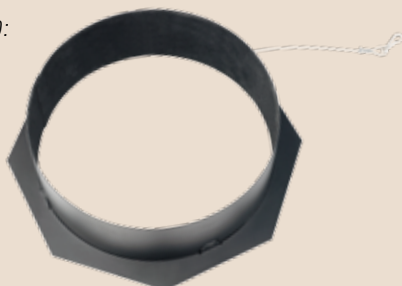

Martin offers a range of front accessories that increase the flexibility of the MAC TW1, for additional optical control. All accessories have a matt black finish and, except for the gel frame, come with a safety wire to attach to the main fixture.

To order the following front accessories for the MAC TW1, please contact your Martin distributor or a City Theatrical distributor, or order directly from City Theatrical Inc. at www.citytheatrical.com, quoting the respective product number.

Top hat

City Theatrical Cat #2780:

MAC TW1 Top Hat

The top hat is specially designed to effectively shield the audience or a camera from the direct source of the light. With a flock coating on the inside, the top hat absorbs light spill, eliminating unwanted reflections.

Top hat with louver

City Theatrical Cat #2781:

MAC TW1 Top Hat with Louver

With the additional honeycomb louver insert, this top hat further eliminates unwanted glare.

Gel frame

City Theatrical Cat #2782:

MAC TW1 Color Frame

The gel frame is a standard holder that accepts regular gel filters from major manufacturers, including all diffusion and correction gels.

Other MAC TW1 accessories
