Safety information

WARNING!

Read the safety precautions in this manual before installing, operating or servicing this product.

The following symbols are used to identify important safety information on the product and in this manual:

Warning!

Safety hazard. Risk of severe injury or death.

Warning!

Powerful light emission. Risk of eye injury.

Warning!

See user manual for important safety information.

Warning!

Hazardous voltage. Risk of lethal or severe electric shock.

Warning!

Hot surfaces and fire hazard.

Warning! Risk Group 2 product according to EN 62471 and IEC/TR 62778. Possibly hazardous radiation emitted from this product. May be harmful to the eyes. Do not stare at operating lamp and do not view the light output with optical instruments or any device that may concentrate the beam.

This lighting fixture is for professional use only and must be installed by a qualified technician. It is not for household use. It presents risks of severe injury or death due to fire hazards, electric shock and falls. It produces a powerful, concentrated beam of light that can create a fire hazard or a risk of eye injury if the safety precautions below are not followed. Respect all locally applicable laws, codes and regulations when installing, operating or servicing the fixture.

The light source contained in this fixture must be replaced by Martin Service or an authorized Martin Service partner only.

Install, operate and service Martin products only as directed in their user manuals, or you may create a safety hazard or cause damage that is not covered by product warranties.

Follow the safety precautions listed below and observe all warnings in this manual and printed on the product. Before you install, operate or service the fixture, check the Martin website at www.martin.com and make sure that you have the latest user documentation for the fixture. Document revisions are indicated at the bottom of page 2.

Technical Support

If you have questions about how to install or operate the fixture safely, please contact Harman Professional Technical support:

- For technical support in North America, please contact:
HProTechSupportUSA@harman.com
Phone: (844) 776-4899
- For technical support outside North America, please contact your national distributor.

Protection from electric shock

Disconnect the fixture from AC power before carrying out any installation or maintenance work and when the fixture is not in use.

Ensure that the fixture is electrically connected to ground (earth).

Use only a source of AC power that complies with local building and electrical codes and has both overload and ground-fault (earth-fault) protection.

Socket outlets or external power switches used to supply the fixture with power must be located near the fixture and easily accessible so that the fixture can easily be disconnected from power.

Isolate the fixture from power immediately if the power plug or any seal, cover, cable, or other component is damaged, defective, deformed, shows signs of water ingress or showing signs of overheating. Do not reapply power until repairs have been completed.

Before using the fixture, check that all power distribution equipment and cables are in perfect condition and rated for

the current requirements of all connected devices.

Use only Neutrik powerCON TRUE1 TOP cable connectors to connect to the fixture's power sockets.

Do not connect devices to power in a chain that will exceed the electrical ratings of any cable or connector used in the chain.

To connect fixtures to mains power in a chain, you must first obtain 12 AWG or 2.5 mm² power input and throughput cables that are 16 A rated and temperature-rated to suit the application. In the USA and Canada the cables must be UL-listed, type SJT or equivalent. In the EU the cables must be type H05VV-F or equivalent. Suitable cables with Neutrik powerCON TRUE1 TOP connectors are available from Martin (see 'Accessories' on page 46). If you use these cables, you can connect fixtures to power in a linked chain, POWER OUT throughput socket to POWER IN input socket, but do not link more than:

- four (4) ELP PAR IP fixtures in total at 100-120 V, or
- seven (7) ELP PAR IP fixtures in total at 200-240 V.

If you intend to connect other devices to the POWER OUT socket in a daisy chain, add together the maximum current draw of all the devices in the chain. Do not create a chain of devices whose total maximum current draw will exceed the maximum current rating of any connector in the chain. The maximum permitted current at the POWER IN connector is 16 A. The maximum permitted current at the POWER OUT connector is 12 A.

The voltage and frequency at the POWER OUT socket are the same as the voltage and frequency applied to the POWER IN socket. Only connect devices to the POWER OUT socket that accept this voltage and frequency.

The fixture has an ingress protection rating of IP65. Do not immerse it. Do not expose it to high-pressure water jets.

The fixture is rated IP65 only when the following types of connector are used on cables connected to the fixture:

- Neutrik powerCON TRUE1 NAC3FX-W (TOP) type connector at the power IN socket,
- Neutrik powerCON TRUE1 NAC3MX-W (TOP) type connector at the power OUT/THRU socket,

- Neutrik TOP type 5-pin locking XLR connectors at the XLR (DMX, RDM) data sockets, and

Use only these connector types and use only cables that are suitable for the given application with respect to humidity, water and sunlight resistance.

The power and data connectors are fitted with rubber caps to protect from water ingress. Keep rubber caps installed at all times on all connectors that are not in use.

Arrange cables so that they arrive at connectors from below. With this arrangement, gravity will cause any condensation or water droplets to run away from connectors.

In wet locations, do not install the fixture with the connections panel facing upwards.

Do not cover, immerse or block the pressure equalization valve on the rear of the fixture.

Protection from burns and fire

Do not operate the fixture if the ambient temperature (T_a) exceeds 40° C (104° F).

The surface of the product casing can reach up to 71° C (160° F) – TBC during operation. Avoid contact by persons and materials. Allow the fixture to cool for at least 15 minutes before handling.

Keep flammable materials well away from the fixture. Keep all combustible materials (e.g. fabric, wood, paper) at least 0.5 m (1.7 ft.) away from the fixture housing.

Ensure that there is free and unobstructed airflow around the fixture. Provide a minimum clearance of 0.5 m (1.7 ft.) around fans and air vents.

Do not use the fixture to illuminate surfaces within 1 m (3.3 ft.) of the fixture.

Do not stick filters, masks or other materials onto any optical component.

The fixture's lenses can focus the sun's rays, creating a risk of fire and damage. Do not expose the front of the fixture to sunlight or any other bright light source.

Protection from eye injury

Warning! Risk Group 2 product according to EN 62471 and IEC/TR 62778.

The ELP PAR IP fixture falls into the following risk groups according to EN 62471 and IEC/TR 62778 at the distances indicated below.

The luminaire should be positioned so that prolonged staring into the luminaire at a distance closer than 21.5 m is not expected.

Do not look directly into the product's light output.

Do not look at operating lamp. Eye injury may result.

Do not look at the light output with magnifiers, telescopes, binoculars or similar optical instruments that may concentrate the light output.

Ensure that persons are not looking directly into the front of the fixture when the product lights up suddenly. This can happen when power is applied, when the product receives a DMX signal, or when certain control menu items are selected.

To minimize the risk of eye irritation or injury, disconnect the fixture from power at all times when the fixture is not in use and provide well-lit conditions to reduce the pupil diameter of anyone working on or near the fixture.

Protection from injury

The fixture is not portable when installed.

Ensure that any supporting structure and/or hardware used can hold at least 10 times the weight of all the devices they support.

If suspending from a rigging structure, fasten the fixture to a rigging clamp. Do not use safety cables as the primary means of support.

If the fixture is installed in a location where it may cause injury or damage if it falls, install as directed in this manual a secondary attachment such as a safety cable that will hold the fixture if a primary attachment fails. The secondary attachment must be approved by an official body such as TÜV as a safety attachment for the weight that it secures, must comply with EN 60598-2-17 Section 17.6.6 and must be capable of bearing a static suspended load that is ten times the weight of the fixture and all installed accessories.

Check that all external covers and rigging hardware are securely fastened.

Block access below the work area and work from a stable platform whenever installing, servicing or moving the fixture.

Do not operate the fixture with missing or damaged covers, shields or any optical component.

In the event of an operating problem, stop using the fixture immediately and disconnect it from power. Do not attempt to use a fixture that is obviously damaged.

Do not modify the fixture in any way not described in this manual or install other than genuine Martin parts.

Refer any service operation not described in this manual to a qualified technician.

Introduction

The ELP PAR IP is an IP65-rated bright LED PAR Can with calibrated color output from seven RGBW LEDs and a motorized zoom. It offers electronic dimming and strobe and features a bracket for floor or truss mounting.

The ELP PAR IP can be controlled using any DMX-compliant controller.

The fixture is supplied with a folding mounting bracket.

Before using the product for the first time

1. Read 'Safety information' on page 4 before installing, operating or servicing the fixture.
2. Unpack and ensure that there is no transportation damage before using the fixture. Never attempt to operate a damaged fixture.
3. Check that the voltage and frequency of the local power source match the mains power requirements of the fixture.
4. Either hard-wire the fixture to an AC mains power source or provide a power input cable and local power plug as described in this manual and connect to an AC mains power outlet.
5. Check the support pages on the Martin Professional website at www.martin.com for the most recent user documentation and technical information about the fixture. Martin user manual revisions are identified by the revision letter at the bottom of the inside cover.

Be prepared for the fixture to suddenly emit bright light when power is applied.

Fixture overview

- 1 - Display
- 2 – Control buttons
- 3 – Tilt adjustment handle
- 4 – DMX IN (Neutrik IP-rated 5-pin locking XLR)
- 5 – Mains power IN (Neutrik powerCON TRUE1 TOP)
- 6 – Mains power THRU (Neutrik powerCON TRUE1 TOP)
- 7 – Pressure equalization valve
- 8 – DMX THRU (Neutrik IP-rated 5-pin locking XLR)
- 9 – Folding floor stand / mounting bracket

Physical installation

Read ‘Safety information’ on page 4 before installing the fixture.

The fixture must be used in a location with adequate ventilation. Ensure that there is free airflow around the fixture.

You can either fasten the fixture to a secure structure (such as a rigging truss) or surface. You can also stand it on a secure surface. Do not place the fixture in a location where it can be moved, fall over, or present a danger of tripping or injury.

If you install the fixture in a location where it may cause injury or damage if it falls, secure it as directed in this user manual using a securely anchored safety cable that will hold the fixture if the primary fastening method fails.

Martin can supply safety cables and rigging clamps that are suitable for use with the fixture (see ‘Accessories’ on page 46).

Mounting bracket angle scales

See illustration on right. The fixture’s mounting bracket has angle scales printed on both sides next to the adjustment handles. The scales show the precise angle at which the head is tilted. There are two scales. The inner scale is for use when standing the fixture on the floor. The outer scale is for use when flying the fixture overhead.

Standing the fixture on a flat, horizontal surface

Use a stable horizontal surface that can support at least 10 times the weight of all the fixtures and equipment that it will support.

See illustration on right. The fixture can be placed on the surface by releasing the adjustment handles (arrowed) on both sides of the fixture, fully opening the legs of the mounting bracket, and then re-tightening the adjustment handles.

Fastening the fixture to a flat surface

Use a stable horizontal surface that can support at least 10 times the weight of all the fixtures and equipment that it will support. Ensure that all fasteners used can support at least ten times the weight of all the fixtures and equipment that they will support.

To fasten the fixture to a surface:

1. See illustration on left. Pass an M12, grade 8.8 steel minimum, bolt or screwbolt through the hole (arrowed) in the center of the main mounting bracket leg and into the surface.
2. If using a bolt, secure with a washer and self-locking nut.
3. Check that the fixture is held securely.
4. If you install the fixture in a location where it may cause injury or damage if it falls, secure it as directed below with a securely anchored safety cable that will hold the fixture if the primary fastening method fails.

Mounting the fixture on a truss

The fixture can be clamped to a truss or similar rigging structure in any orientation. When installing the fixture hanging vertically down, you can use an open-type clamp such as a G-clamp. When installing in any other orientation, you must use a half-coupler clamp (see illustration on right) that completely encircles the truss chord.

To clamp the fixture to a truss:

1. Check that the rigging structure can support at least ten times the weight of all fixtures and equipment to be installed on it.
2. Block access under the work area.
3. Either:
 - Bolt a rigging clamp directly to the fixture's mounting bracket using an M12 grade 8.8 steel bolt and self-locking washer, or

- Bolt a rigging clamp to a Martin omega bracket (available as an accessory by ordering P/N 91602001 from your Martin supplier) using a grade 8.8 steel bolt. See illustration on right. Fold the legs of the fixture's mounting bracket together and fasten the omega bracket securely to the mounting bracket. Turn the quarter-turn fasteners on the omega bracket a full 90° to lock.

4. Working from a stable platform, hang the fixture with its clamp on the truss and fasten the clamp securely.
5. Loosen the adjustment handles on both sides of the fixture, adjust the fixture's tilt angle, and re-tighten the handles.
6. Secure the fixture with a safety cable as directed below.

Securing with a safety cable

1. Obtain a safety cable (or other secondary attachment) that is approved for the weight of the fixture.
2. See illustration on right. The fixture's safety cable attachment point (arrowed) is located between the cooling ribs on the top of the fixture. Fasten the cable to this attachment point by either looping it around the attachment point or using a carabiner clip.

Do not simply loop the safety cable around the legs of the mounting bracket, as this will leave the fixture unsecured if the fixture separates from the mounting bracket.

3. Remove as much slack as possible from the safety cable and fasten it to a secure anchoring point.
4. Make sure that the safety cable will hold the fixture if a primary attachment fails.

Your Martin dealer can supply suitable safety cables and rigging clamps (see 'Accessories' on page 46).

Connecting to AC power

Read ‘Safety information’ on page 4 before connecting the fixture to AC mains power.

Before you connect other fixtures to the POWER OUT socket, see ‘Linking fixtures to power in a chain’ on page 16.

For protection from electric shock, the fixture must be grounded (earthed). The power distribution circuit must be equipped with a fuse or circuit breaker and ground-fault (earth-fault) protection.

Socket outlets or external power switches used to supply the fixture with power must be located near the fixture and easily accessible so that the fixture can easily be disconnected from power.

Do not use an external dimming system to supply power to the fixture, as this may cause damage to the fixture that is not covered by the product warranty.

The fixture requires a power input cable with a Neutrik powerCON TRUE1 NAC3FX-W TOP female cable connector for AC mains power input. The cable must meet the requirements listed under “**Protection from electric shock**” on page 5. Martin can supply suitable cables with female TRUE1 TOP input connectors 1.5 m (4.9 ft.) or 5 m (16.4 ft.) long, as well as loose female TRUE1 TOP input connectors (see “Accessories” on page 46).

The fixture can be hard-wired to a building electrical installation if you want to install it permanently, or a power plug that is suitable for the local power outlets can be installed on the power cable. If you install a power plug on the power cable, follow the plug manufacturer’s instructions and connect the wires in the power cable as shown in this table:

	Earth, Ground or 	Neutral or N	Live or L
US system	Green	White	Black
EU system	Yellow/green	Blue	Brown

The fixture has an auto-ranging power supply that accepts AC mains power at 100-120/200-240 V at 50/60 Hz. Do not apply AC mains power at any other voltage or frequency to the fixture.

Linking fixtures to power in a chain

If you obtain a 12 AWG / 2.5 mm² power input cable and 12 AWG / 2.5 mm² throughput cables from Martin (see “Accessories” on page 46), you can relay mains power from one fixture to another by connecting fixtures to power in a linked daisy-chain, POWER OUT throughput socket to POWER IN input socket.

Using 12 AWG / 2.5 mm² cables from Martin, you can create a daisy chain of linked fixtures that contains:

- maximum four (4) ELP PAR IP fixtures in total at 100-120 V, or
- maximum seven (7) ELP PAR IP fixtures in total at 200-240 V.

Connecting to data

Read 'Safety information' on page 4 before connecting the fixture to a control data source.

A DMX 512 data link is required in order to control the fixture via DMX. The fixture has 5-pin XLR connectors for DMX data input (IN) and output (THRU).

The number of daisy-chained fixtures is limited by the number of DMX channels required by the fixtures in relation to the maximum 512 channels available in one DMX universe. Note that if independent control of a fixture is required, it must have its own DMX channels. Fixtures that are required to behave identically can share the same DMX address and channels. To add more fixtures or groups of fixtures when the above limit is reached, add a DMX universe and another daisy-chained link.

Tips for reliable data transmission

Use shielded twisted-pair cable designed for RS-485 devices: standard microphone cable cannot transmit control data reliably over long runs. 24 AWG cable is suitable for runs up to 300 meters (1000 ft.). Heavier gauge cable and/or an amplifier is recommended for longer runs. The pinout on all connectors is pin 1 = shield, pin 2 = cold (-), and pin 3 = hot (+). Pins 4 and 5 in the 5-pin XLR connectors are not used in the fixture but are available for possible additional data signals as required by the DMX512-A standard. Standard pinout is pin 4 = data 2 cold (-) and pin 5 = data 2 hot (+).

If you need to split the link into branches, use an opto-isolated splitter. Use an RDM-compatible splitter when using RDM.

Terminate the link by installing a DMX termination plug in the output socket of the last fixture. The termination plug, which is a male XLR plug with a 120 Ohm, 0.25 W resistor soldered between pins 2 and 3, "soaks up" the control signal so it does not reflect and cause interference. If a splitter is used, terminate each branch of the link.

Connecting the DMX data link

To connect the fixture to data:

1. Connect the DMX data output from the controller to the first fixture's male XLR DMX input connector.
2. Connect the first fixture's DMX output to the DMX input of the next fixture and continue connecting fixtures output to input. Terminate the last fixture on the link with a DMX termination plug.

Fixture setup

This section explains the fixture characteristics that can be set to determine how it can be controlled and will behave. These settings are made using the menu available in the control panel. Settings are retained in memory when the fixture is powered off.

You can find a complete map of the control menu structure in 'Control menus' on page 39.

Using the control menus

- To access the control menus or to return to the next highest level in the menu structure, press the MENU button.
- Navigate the menu structure using the DOWN, UP and ENTER buttons.
- If you have selected a menu option, confirm your selection and set that option using the ENTER button, or if you want to return to the next highest level in the menu structure without making a change, press the MENU button.
- To exit the menus, press the MENU button.

Special keypress functions

- Holding the UP button and pressing the DOWN button rotates the control panel display through 180°.
- Holding the MENU button and pressing the UP button resets the entire fixture.
- Holding the ENTER button pressed for two seconds puts the fixture into Focus shortcut mode for one minute (see 'Focus shortcut' on page 26).

MENU	<ul style="list-style-type: none">• Activate the control menus, or• open the Shortcuts menu by holding for 2 seconds, or• return to the previous level of the menu structure, or• press to exit the menus
 DOWN	Go down a menu level
 UP	Go up a menu level
ENTER	<ul style="list-style-type: none">• Confirm the selected function• Hold for 2 seconds to enter Focus shortcut mode

Menu shortcuts

Pressing and holding the MENU button for two seconds opens a small Shortcuts menu with the following items:

- RESET ALL carries out a complete reset of the fixture with all its effects.
- ROTATE DISPLAY rotates the control panel display through 180°. This function makes it easier to read the control panel menus when changing from standing to hanging installation.
- PERSONALITY OVERVIEW displays a list of the fixture's personality settings. Use the DOWN and UP buttons to scroll through the list.

DMX address setting

The DMX address, also known as the start channel, is the first channel used to receive instructions from a DMX controller. The fixture uses 14 DMX channels. This means that if you have a group of fixtures and you set the first fixture's DMX address to 1, then DMX address 15 is available for the next fixture, DMX address 29 for the fixture after that, and so on.

For independent control, each fixture must be assigned its own control channels. You can give the same DMX address to two fixtures of the same type if you want them to behave identically. Giving the same DMX address to multiple fixtures can be useful for grouped control and troubleshooting.

To set the fixture's DMX address:

1. In the fixture's control panel, use the UP and DOWN buttons to select DMX ADDRESS and press ENTER. The fixture's currently set DMX address will blink in the display.
2. Use the UP and DOWN buttons to select a new address.
3. Once the new address has been selected, press ENTER to confirm it (or press MENU to exit without making a change).

Dimming curves

Optically linear

Square law

Inverse square law

S-curve

Four dimming curves are available:

LINEAR – The increase in light intensity appears to be linear as DMX value is increased.

SQUARE LAW – light intensity control is finer at low levels and coarser at high levels.

INVERSE SQUARE LAW – light intensity control is coarser at low levels and finer at high levels.

S-CURVE – light intensity control is finer at low levels and high levels and coarser at medium levels.

To set the fixture's dimming curve:

1. Select DIMMER CURVE and press ENTER. The currently set dimming curve mode will blink in the display.
2. Use the DOWN and UP buttons to select LINEAR, SQUARE LAW, INV SQ LAW, or S-CURVE.
3. Press ENTER to confirm your choice (or press MENU to exit without making a change).

Dimming speed and smoothness

You can optimize dimming to give either the fastest or the smoothest changes in dimming levels. To optimize dimming:

1. Select DIMMING SPEED and press ENTER.
2. Use the DOWN and UP buttons to select FAST (dimmer optimized for speed) or SLOW (dimmer optimized for smoothness).
3. Press ENTER to confirm your choice (or press MENU to exit without making a change).

Blackout or Hold if DMX signal stops

You can decide how the fixture should behave if you are controlling the fixture via DMX and then you stop sending the DMX data signal:

1. Select NO DATA MODE and press ENTER. The currently set mode will blink in the display.
2. Using the DOWN and UP buttons, select BLACKOUT or HOLD to decide how the fixture should respond if it stops receiving a DMX signal:
 - If you select BLACKOUT, the fixture will black out
 - If you select HOLD, the fixture will continue to show the effect that it is displaying at the time.
3. Press ENTER to confirm your choice (or press MENU to exit without making a change).

Cooling mode

The cooling mode setting lets you decide whether to give priority to lowest noise level or maximum light output:

1. Select COOLING MODE and press ENTER. The currently set mode will blink in the display.
2. Using the DOWN and UP buttons, select one of the three cooling options:
 - If you select REGULATED FANS, the fans operate at normal speed. Temperature regulation increases fan speed if the fixture approaches its maximum operating temperature. This setting provides a good compromise between low fan noise and powerful light output.
 - If you select THEATER MODE, the fans operate at lower speed. Temperature regulation reduces maximum light output if the fixture approaches its maximum operating temperature. This setting gives priority to the lowest possible noise.
The THEATER MODE setting also increases the LED PWM frequency to 19 200Hz to ensure flicker-free high speed video recording.
 - If you select FULL, the fans operate at full speed without temperature regulation. This setting maximizes cooling and gives priority to the highest possible light output intensity.
3. Press ENTER to confirm your choice (or press MENU to exit without making a change).

Display rotation

The fastest way to rotate the control panel display through 180° to match the fixture's orientation is to press and hold the UP button and then press the DOWN button.

You can also rotate the display using the DISPLAY control menu:

1. Select DISPLAY → DISPLAY ROTATION and press ENTER.
2. Use the DOWN and UP buttons to select NORMAL (display in normal orientation) or ROTATE 180° (display inverted to make it easier to read if you install the fixture hanging vertically from its mounting bracket).
3. Press ENTER to confirm your choice (or press MENU to exit without making a change).

Display intensity

To set the brightness of the control panel display:

1. Select DISPLAY → DISPLAY INTENSITY and press ENTER.

2. Use the DOWN and UP buttons to adjust the brightness of the display from 10% to 100%.
3. Press ENTER to confirm your choice (or press MENU to exit without making a change).

Temperature units

To set the fixture to display temperatures in degrees Celsius or Fahrenheit:

1. Select DISPLAY → TEMPERATURE UNIT and press ENTER.
2. Use the DOWN and UP buttons to select °C or °F.
3. Press ENTER to confirm your choice (or press MENU to exit without making a change).

Resetting to factory defaults

To reset the fixture to its factory default settings:

1. Select FACTORY DEFAULT and press ENTER to confirm.
2. Use the DOWN and UP buttons to select YES to erase any custom settings that you have configured and reset the fixture to its factory default settings, or select NO.
3. Press ENTER to confirm your choice (or press MENU to exit without making a change).

Fixture test

You can run an automatic sequence to test all the fixture's effects or manually test individual effects using the control menus.

Automatic effects test

To perform a complete test of all of the fixture's effects:

1. Select FIXTURE TEST → TEST ALL and press ENTER to confirm. The automatic test will run.
2. To stop the test and return to the previous level of the menu structure, press MENU.

Manual effects tests

You can also manually test individual effects.

To test LED dimming:

1. Select FIXTURE TEST → TEST DIMMER and press ENTER.
2. To stop the test and return to the previous level of the menu structure, press MENU.

To test an individual effect:

1. Select **FIXTURE TEST** → **TEST EFFECTS** and press **ENTER**.
2. Use the **DOWN** and **UP** buttons to select **RED**, **GREEN**, **BLUE**, **CTC**, **COLOR** (this tests the virtual color wheel effect), or **ZOOM**. Press **ENTER** to confirm your selection. The fixture will now run an automatic test of the selected effect.
3. Press **MENU** to exit the test and return to the list of effects.

Fixture information

Power on time

1. Select **INFORMATION** → **POWER ON TIME** and press **ENTER** to display the total number of hours the fixture has been powered on since it left the factory.
2. To return to the previous level of the menu structure, press **MENU**.

LED operating time

1. Select **INFORMATION** → **LED HOURS** and press **ENTER** to display the total number of hours the LEDs have been activated since the fixture left the factory.
2. To return to the previous level of the menu structure, press **MENU**.

Firmware version

To see which software version is installed in the fixture:

1. Select **INFORMATION** → **SW VERSION** and press **ENTER**. The display will indicate the currently installed firmware version.
2. Use the **UP** and **DOWN** buttons to scroll through firmware revisions.
3. To return to the previous level of the menu structure, press **MENU**.

Fixture ID number

You can set a custom 4-digit ID number for the fixture to help you identify it. To manage the ID number:

1. Select **INFORMATION** → **FIXTURE ID** and press **ENTER**. The display will indicate the current fixture ID number.
2. Use the **DOWN** and **UP** buttons to increase or decrease the current fixture ID number until you reach the ID number that you want to allocate to the fixture.
3. Press **ENTER** to confirm the new ID number (or press **MENU** to exit without making a change).

RDM unique ID number

You can view the fixture's unique non-resettable 12-digit RDM ID number.
To view the RDM UID number:

1. Select INFORMATION → RDM UID and press ENTER. The display will indicate the fixture's unique RDM ID number.
2. Press MENU to exit.

Fixture temperature readouts

To check the onboard temperature of the fixture:

1. Select INFORMATION → TEMPERATURES and press ENTER. The fixture will display on two lines the current temperatures of the LED PCB and of the PSU PCB.
2. To return to the previous level of the menu structure, press MENU.

Fan speed readouts

To view the current speed of each of the fixture's cooling fans in RPM:

1. Select INFORMATION → FAN SPEED and press ENTER. The fixture will display on two lines the current speeds in RPM of the LED PCB cooling fan and of the PSU PCB cooling fan.
2. To return to the previous level of the menu structure, press MENU.

DMX Live

You can view the DMX values currently being received on each of the fixture's DMX channels. This can be useful for troubleshooting purposes.

To view the DMX values being received:

1. Select DMX LIVE and use the UP and DOWN buttons to scroll through the value being received on each channel.
2. To return to the previous level of the menu structure, press MENU.

Resetting the fixture

You can reset the entire fixture to return it to its state when you powered it on, or you can reset its effects only.

- To carry out a full reset, select MANUAL CONTROL → RESET → ALL, select YES or NO and press ENTER. The entire fixture will reset as if you had cycled power. The reset process will take several seconds.
- To reset only the fixture's effects, select MANUAL CONTROL → RESET → EFFECTS and press ENTER. The fixture's effects will reset. The effects reset process will take several seconds.

Manual control

You can control the fixture's effects manually without needing a DMX signal. This lets you set up a stand-alone scene.

To manually control the fixture:

1. Select MANUAL CONTROL and then use the UP and DOWN buttons to scroll to the effect that you want to control. Press ENTER.
2. Use the UP and DOWN buttons to scroll to the DMX value from 000 to 255 that you want to send to that effect. Press ENTER to confirm and send that value.
3. To return to the list of effects, press MENU.
4. If you want to manually control other effects together with the first effect, repeat steps 1. and 2. and 3. above for the other effects. When you have finished setting effects, return to the previous level of the menu structure, by pressing MENU.

The fixture will continue to show the effects that you have set manually until you set new manual control values for the effects. The effects are unaffected by a power OFF/ON cycle: if you power the fixture off and on again, it will resume showing the effects.

To stop the effects, open the DMX SETUP menu. This will immediately stop all manually controlled effects.

When in manual control mode, pressing any button on the control panel lights up the control panel display and shows the message MANUAL CONTROL MODE.

Focus shortcut

The fixture features a 'focus shortcut' mode that lets you adjust the zoom effect. This can be useful if you are setting up multiple fixtures in the rig and want to match the appearance of their projected beams.

To adjust the zoom effect:

1. Hold ENTER for two seconds. Focus shortcut mode is now enabled for one minute. Light output switches to full white and zoom moves to narrow
2. Use the UP and DOWN buttons to adjust the zoom effect for optimum angle and position.
3. To return to the previous level of the menu structure, press MENU.
4. The fixture will keep its zoom adjustment setting until the next power cycle.

Control / Settings DMX channel

The Control / Settings DMX channel lets you configure certain fixture settings remotely via DMX. The control / settings functions require you to hold the required DMX value for a certain number of seconds to implement them (see DMX protocol section on page 35).

The following options are available on the Control / Settings DMX channel:

Extended, raw and calibrated modes

In extended mode the fixture is white calibrated.

In raw mode, the fixture is completely uncalibrated and all LEDs operate at up to full intensity. The color output of one fixture may not exactly match that of other fixtures.

In calibrated mode, LED intensity is slightly reduced where necessary in order to ensure that each fixture's color output matches that of other fixtures.

Tungsten emulation mode

In tungsten emulation mode, the fixture's white light output is made warmer, the warm shift is increased at lower dimming levels, fading in is smoother and an 'afterglow' effect is added when fading out. This mode gives the 'look and feel' of a fixture that uses an incandescent light bulb as its source.

Hibernation mode

Hibernation mode sets light output intensity to zero and disables effect deployment.

The main purpose of this mode is to protect the fixture from the intake of airborne material such as dust and confetti and to provide an option for situations where noise is critical. The small reduction in power consumption obtained in hibernation mode is not the mode's main purpose.

When you bring the fixture out of hibernation mode, it performs a full reset.

Scene capture

The scene capture function lets you record a scene (a *scene* consists of a certain combination of effects, or certain 'look') and show that scene at any time.

There are three scene capture controls on the Control / Settings DMX channel:

- **Capture current scene** stores the currently displayed scene in the fixture's memory.
- **Captured scene playback = ON** sets the fixture to show the scene that is stored in memory whenever the fixture is not receiving a DMX signal.

- **Captured scene playback = OFF** disables the scene playback function: the fixture does not show the scene that is stored in memory.

If you capture a scene, the fixture keeps that scene in memory even if you cycle power off and on again.

Effects

See 'DMX protocol' on page 35 for a full list of the DMX channels and values required to control the different effects.

Shutter effect

The electronic 'shutter' effect provides instant open and blackout, variable speed regular and random strobe.

Dimmer

Overall intensity can be adjusted 0-100% using smooth continuous electronic dimming with 16-bit control resolution.

Custom colors

The fixture offers an RGB color mixing interface with 16-bit resolution. Colors are obtained using RGBW LED output.

Color wheel effect

Besides color mixing, the ELP PAR IP features a virtual color wheel effect with 48 preset colors. The virtual color wheel also provides variable speed color scrolling and random colors.

Note that DMX commands sent on the virtual color wheel channel override DMX commands sent on individual RGB color channels. This means that if you want to use RGB color control on DMX channels 4 – 9, the color wheel effect on channel 10 must be set to a DMX value from 0 to 10 (open position).

The virtual color wheel follows the selected calibration mode (see 'Extended, raw and calibrated modes' on page 27).

Color Temperature Control

The ELP PAR's CTC channel lets you vary the color temperature of the fixture's white output from 1800 K to 12 850 K. The default color temperature is 6000 K (which corresponds to DMX value 118 on the CTC channel).

If the fixture cannot reach some low CTC values, it clips at the lowest achievable value (for example, DMX values 0-34 all give a color temperature of 1800 K).

Note that CTC is disabled if you put the fixture into raw mode.

Zoom

The Zoom channel lets you vary the angle of the light output continuously from minimum to maximum.

RDM

The ELP PAR IP responds to the following RDM PIDs:

PID	Name	Description	GET	SET
0x0001	DISC_UNIQUE_BRANCH	Fixture discovery	N/A	N/A
0x0002	DISC_MUTE	Fixture discovery	N/A	N/A

Maintenance

Read 'Safety information' on page 4 before servicing the fixture.

Refer any service operation not described in this user manual to a qualified service technician.

Disconnect the fixture from mains power and allow to cool completely before cleaning or servicing.

Service fixtures in an area where there is no risk of injury from falling parts, tools or other materials.

Cleaning

Excessive dust, smoke fluid, and particle buildup degrades performance, causes overheating and will damage the fixture. Damage caused by inadequate cleaning or maintenance is not covered by the product warranty.

The cleaning of external optical lenses must be carried out periodically to optimize light output. Cleaning schedules for lighting fixtures vary greatly depending on the operating environment. It is therefore impossible to specify precise cleaning intervals for the fixture. Environmental factors that may result in a need for frequent cleaning include:

- Use of smoke or fog machines.
- High airflow rates (near air conditioning vents, for example).
- Presence of cigarette smoke.
- Airborne dust (from stage effects, building structures and fittings or the natural environment at outdoor events, for example).

If one or more of these factors is present, inspect fixtures within their first 100 hours of operation to see whether cleaning is necessary. Check again at frequent intervals. This procedure will allow you to assess cleaning requirements in your particular situation. If in doubt, consult your Martin dealer about a suitable maintenance schedule.

Use gentle pressure only when cleaning, and work in a clean, well-lit area. Do not use any product that contains solvents or abrasives, as these can cause surface damage.

To clean the fixture:

1. Disconnect the fixture from power and allow it to cool for at least 15 minutes.
2. Vacuum or gently blow away dust and loose particles from the outside of the fixture and the air vents with low-pressure compressed air.

3. Clean lenses by wiping gently with a soft, clean lint-free cloth moistened with a weak detergent solution. Do not rub the surface hard: lift particles off with a soft repeated press. Dry with a soft, clean, lint-free cloth or low-pressure compressed air. Remove stuck particles with an unscented tissue or cotton swab moistened with glass cleaner or distilled water.
4. Clean the pressure equalization valve on the back of the fixture by brushing gently with a soft brush. If the valve appears to be blocked, contact a Martin Service agent for replacement.
5. Check that the fixture is dry before reapplying power.

Uploading new firmware

Important! Do not switch the fixture off or disconnect the source of the firmware during an update, or the firmware will be corrupted.

You can check the currently installed firmware version in the INFORMATION menu. Firmware updates can be downloaded automatically from the Martin cloud using the Martin Companion software suite on a PC connected to the Internet.

Fixture information and settings are not affected when you upload new firmware to the fixture. All ELP PAR IP fixtures that are powered on and connected via a DMX link to the fixture that you update will also have their firmware updated.

If you update firmware to a newer version, check the ELP PAR IP area of www.martin.com to see whether an updated version of this User Guide is available for the new firmware.

You need the following in order to install firmware:

- A Windows PC running the latest version of the Martin Companion software suite that is available for download from the Martin website at www.martin.com.
- The latest ELP PAR IP firmware files (Martin Companion automatically downloads these from the Martin fixture firmware cloud when you run it on a PC that is connected to the Internet).
- A Martin Companion Cable USB-DMX hardware interface (see “Accessories” on page 46). Note that you can install new firmware in multiple fixtures at the same time using the Martin Companion Cable.

To install the ELP PAR IP firmware using a Martin Companion Cable:

1. Apply power to the ELP PAR IP fixture(s) and allow it to boot
2. Connect the Martin Companion Cable’s USB connector to a USB port on your PC. Connect the Martin Companion Cable’s XLR connector to either the fixture’s DMX IN connector or the DMX link.

3. Start the PC and launch Martin Companion. Check that the Martin Companion application correctly detects the Martin Companion Cable (a green dot should appear next to **USB Connected** in the top right-hand corner of the window).
4. Locate the latest ELP PAR IP firmware in Martin Companion (**Firmware** → **ELP** → **ELP PAR IP**).
5. Start the firmware update by clicking **Update Firmware** in Martin Companion. Do not disconnect the Martin Companion Cable or power off the fixture(s) until the upload is complete and the fixture(s) has successfully rebooted.
6. If you are updating multiple fixtures over a DMX link, check that they have all rebooted correctly.

Service and repairs

There are no user-serviceable parts inside the fixture. Do not open the housing. The LED light source is not user-replaceable.

Refer any service or repair operation not described in this manual to an authorized Martin service technician. Do not try to carry out such an operation yourself, as doing so may present a health or safety risk. It may also cause damage or malfunction, and it may void your product warranty.

Installation, on-site service and maintenance can be provided worldwide by the Martin Professional Global Service organization and its approved agents, giving owners access to Martin's expertise and product knowledge in a partnership that will ensure the highest level of performance throughout the product's lifetime. Please contact your Martin supplier for details.

	CTC Tint	0 - 255	Adjust green/magenta tint
	RAW CTC	0 - 255	Adjust 6000 K center point
	RAW CTC Tint	0 - 255	Adjust green/magenta tint
	ZOOM	-128 - 127	Calibrate zoom

CALIBRATION (continued)	LOAD DEFAULTS	LOAD	Load the factory default calibration settings
		SAVE	Save current custom calibration settings. Important! See note below
	SAVE SETTING	SAVE	Replace factory default calibration settings with custom values or zero values. Important! See note below
	CLEAR ALL VALUES	RESTORE	Reset all calibration values to zero. Important! See note below

Important note

- LOAD DEFAULTS → SAVE stores any custom calibration values that you have created in the CALIBRATION menu. The fixture will keep using these values even when the fixture power is cycled off and on.
- LOAD DEFAULTS → LOAD loads the original factory default calibration values (unless these have been overwritten or erased – see below)
- CLEAR ALL VALUES → RESTORE erases all calibration settings – both custom settings and the original factory settings. **Important! If you use this command you will need to fully recalibrate the fixture.**
- **Important! SAVE SETTING → SAVE permanently overwrites the original factory settings with either the custom settings created using LOAD DEFAULTS → SAVE or the zero values created using CLEAR ALL VALUES → RESTORE. The SAVE SETTING → SAVE command should normally be used by Martin Service only!**

Troubleshooting

This section describes a few common problems that may occur during operation and provides some suggestions for easy troubleshooting:

Symptom	Potential cause	Remedies
No light from fixture or fans not working.	Power supply issue such as faulty connector, damaged cable or internal fault.	Ensure that the mains supply is connected and supplying power to the fixture. Check all power connections and cables. Contact your Martin authorized distributor or service center for assistance.
One of the control channels is unresponsive or only responds intermittently.	DMX setup or DMX link fault. Faulty cable connection. Damaged zoom step motor.	See next section. Contact your Martin authorized distributor or service center for assistance.
Fixture does not respond to DMX control.	Incorrect DMX addressing. Fault on DMX link due to damaged connector or cable, or potential interference from proximity to a high-voltage installation.	Ensure that fixture's DMX address matches address set on DMX control device. Check all DMX cables and connections. Ensure that DMX link is terminated. Check that all components on DMX link use standard DMX polarity. Attempt to control the fixture with another DMX control device. Move or shield link if it is close to an unshielded high-voltage installation.

Specifications

Physical

Dimensions incl. bracket (LxWxH) ... 315x285x398 mm (12.4x11.3x15.7 in.)
Weight 9.1 kg (20.1 lbs.)

Dynamic Effects

Color mixing RGBW
Color presets 48 color presets, virtual color wheel effects
Color temperature Variable 1800 – 12 850 K
Electronic dimming 0 - 100%, four dimming curve options
Strobe and pulse effects Variable speed and action, random strobe
Electronic 'shutter' effect Instant open and blackout
Zoom Motorized

Control and Programming

Control options DMX, RDM
DMX channels 14
16-bit fine control Dimming, RGB, Zoom
LED color management modes Raw, extended and calibrated
DMX address setting Control panel with OLED display
DMX compliance USITT DMX512-A
RDM compliance ANSI/ESTA E1.20

Optics

Light source 7 x 40 W RGBW Osram LEDs
Minimum LED lifetime 50 000 hours (to >70% luminous output)*
Maximum output 3300 lumens
Beam angle (half-peak) 4.4 – 33.3°
Field angle (one-tenth peak) 5.5 – 50.0°

**Figure obtained under manufacturer's test conditions*

Construction

Filter mount PAR 46 – 191 x 191 mm (7.5 x 7.5 in.)
Color Black
Housing Aluminum and composite
Ingress protection rating IP65

Installation

Mounting points Adjustable bracket, surface or truss
mount (fits Martin Omega Bracket)
Location Wet locations, temporary outdoor use, not for household use
Orientation Any
Minimum distance to illuminated surfaces 1 m (3.3 ft.)
Minimum distance to combustible material 0.5 m (1.7 ft.)
Minimum clearance around fans and vents 0.5 m (1.7 ft.)

Connections

AC power in and thru Neutrik powerCON TRUE1 TOP
DMX data in and thru Neutrik IP-rated 5-pin locking XLR

Electrical

AC power..... 100-240 V nominal, 50/60 Hz
Typical power consumption.....300 W
Maximum half-cycle RMS inrush current 11.2 A
Power supply unit.....Auto-ranging electronic switch mode

Maximum power and current

100-120 V, 60 Hz 3.7 A, 330 W, Power factor 0.99
220-240 V, 50 Hz 1.7 A, 330 W, Power factor 0.94

**Measurements made at nominal voltage with all LEDs at full intensity.
Allow for a deviation of +/- 10%.*

Thermal

Maximum surface temperature 73° C (164° F)
CoolingForced air (temperature regulated, low noise)
Maximum ambient temperature (Ta max.) 40° C (104° F)
Minimum ambient temperature (Ta min) -10°C (14° F)
Total heat dissipation* 1126 BTU/hr.

**Calculated, +/- 10%, at full intensity, full white*

Approvals

Included Items

Adjustable mounting bracket

Accessories

Power input cables, 16 A

Power Input Cable, H07RN-F, 2.5 mm², bare ends to
TRUE1 NAC3FX-W TOP (female), 1.5 m (4.9 ft.) P/N 91611797
Power Input Cable, SJOOW, 12 AWG, bare ends to
TRUE1 NAC3FX-W TOP (female), 1.5 m (4.9 ft.) P/N 91610173

Power relay cables, 16 A, for relaying power to fixtures in chains

Power Relay Cable, H07RN-F, 2.5 mm²,
TRUE1 to TRUE1, 2.5 m (8.2 ft.) P/N 91611796
Power Relay Cable, SJOOW, 12 AWG,
TRUE1 to TRUE1, 2.5 m (8.2 ft.) P/N 91610172

Power connectors

Cable Connector, Neutrik powerCON TRUE1
NAC3FX-W TOP (female) P/N 91611789HU
Cable Connector, Neutrik powerCON TRUE1
NAC3MX-W TOP (male) P/N 91611788HU

Installation hardware

Martin Omega bracket for rigging clamp attachment P/N 91602001
Half-coupler clamp P/N 91602005
G-clamp (suspension vertically downwards only) P/N 91602003
Quick-trigger clamp (suspension vertically downwards only) . P/N 91602007
Safety Cable, SWL 60 kg, BGV C1 / DGUV 17, black P/N 91604006
Safety Cable, SWL 60 kg, BGV C1 / DGUV 17, silver P/N 91604007

Supplier's Declaration of Conformity

Harman Professional, Inc. have issued an FCC Supplier's Declaration of Conformity for this product. The Declaration of Conformity is available for download from the ELP PAR IP area of the Martin website at www.martin.com

FCC compliance statement

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Disposing of this product

Martin® products are supplied in compliance with Directive 2012/19/EC of the European Parliament and of the Council of the European Union on WEEE (Waste Electrical and Electronic Equipment), where applicable. Help preserve the environment! Ensure that this product is recycled at the end of its life. Your supplier can give details of local arrangements for the disposal of RUSH by Martin products
