Brief Description
Of Issue:

To check the status of the refrigeration system at any time, use the ICE menu by putting S3 down (dipswitch 12). The left hand panel will now display the name of the value, while the right hand display will show the temperature. Use the scroll keys on the right hand display to move through the available values. These values represent the temperatures at specific locations within the refrigeration system. The abbreviations are as follows:

AI – No function at present
TA – Ambient temperature
EO – Evaporator outlet
EI – Evaporator inlet
CO – Condenser output
CI – Condenser input

1. Turn the machine on
 2. Ensure the ICE button is ON
 3. Ensure STANDBY is ON
 4. Turn switch S3 ON
- DO NOT FIRE THE MACHINE
5. Leave machine for 30 mins to stabilise
 6. Scroll through the ICE menu and record your readings here:

TA EO EI CO CI

<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
----------------------	----------------------	----------------------	----------------------	----------------------

Now fire the machine at full output (S3 off, set to Level 20, Fog ON) for 5 mins
After 5 mins, keep the machine firing and record your readings (S3 ON) here:

TA EO EI CO CI

<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text"/>
----------------------	----------------------	----------------------	----------------------	----------------------
